WARNING
AIR IMPACT WRENCH SAFETY

Any piece of equipment can be dangerous if not operated properly. **YOU** are responsible for the safe operation of this equipment. The operator must carefully read and follow any warnings, safety signs and instructions provided with or located on the equipment. Do not remove, defeat, deface or render inoperable any of the safety devices or warnings on this equipment. **IF** any safety devices or warnings have been removed, defeated, defaced or rendered inoperable, **DO NOT USE THIS EQUIPMENT!!!**

Always wear eye protection!

Only use sockets rated for use with an Impact Wrench!

SAFETY PRECAUTIONS:
The hose that feeds air to the wrench must be secured to the wrench so it cannot become accidentally disconnected and flail around, hurting someone.
Impact Socket must be used - usage of hand socket sets will result in breakage of the socket and possible injury to the operator.
Sockets must be secured to wrench.

USE HINTS:
Do not allow the impact wrench to hammer on a stuck nut over 10 seconds because the wrench will break if you do so.
Always have 100-PSI air pressure minimum to operate the wrench. Less pressure will seriously reduce the capacity of the wrench.
You need a larger wrench if the nut will not move in 10 seconds.
You need a larger compressor if the air pressure falls below 100-PSI.

MAINTENANCE:
Impact wrenches must be protected from dirt and water when not in use.
They must be oiled every 4 hours of use with air tool oil.

If the person receiving this handout will not be the user of the equipment, forward these instructions to the operator. **IF** there is any doubt as to the operation or safety of the equipment, **DO NOT USE!!! CALL A TOOL SHED IMMEDIATELY!!!** **FAILURE TO FOLLOW THESE INSTRUCTIONS COULD RESULT IN INJURY OR DEATH**
